**2nd Device Number** \_\_\_\_\_  
(if purchased)

Sample Collected from    Kitchen Sink    Outside Tap    Other \_\_\_\_\_

**Sample Collection Date: (Required)** \_\_\_\_\_

**Sample Collection Time: (Required)** \_\_\_\_\_

Remove any aeration devices or faucet filters from the tap. Run the cold water until fresh water is being drawn from the well. Water that has been sitting in a holding tank or the pipes does not contain as much Radon as fresh well water. Slowly fill a bowl or deep pan with the spigot underwater. Minimize aeration and splashing. Submerge the vial and the cap open side up until they fill with water. While the vial and cap are under water, screw the cap back on tightly. Lift vial out of water and turn it upside down to check for air bubbles. If there is a bubble or an air space, repeat the process. If a double water test was purchased take the 2nd sample from the same supply as the first. If the lab receives the sample with 1 mL or 1g of water missing, about the size of a dime, the test will be invalid.

Fill out this data sheet with **Report To** name, address, e-mail, test address, device number(s) and the date and time the sample(s) were collected. We cannot calculate your result(s) without the sample collection date and time. Mail your sample back to the lab immediately. Vial must be received within 7 days of sampling. **Please note all CT and NY water samples must be received within 4 days of sampling. A delay in receipt will invalidate your test.**

For the most accurate results, it is recommended that water samples be packaged in a way that prevents either freezing or extreme heat., such as in a cooler or insulated shipping box.

Temperature upon receipt:	_____	Initials	_____
Bubble present?	<input type="checkbox"/> Yes	<input type="checkbox"/> No	Grams missing: _____

## **IMPORTANT TIPS FOR A SUCCESSFUL RADON IN WATER TEST**

1. Follow all test kit instructions carefully and fill out the datasheet completely.
2. **Keep a record** of your device serial number and the zip code of the property tested. After you mail the test kit you can use these numbers to check for your test results at [www.accustarlabs.com](http://www.accustarlabs.com). You may use and keep this form.

1st DEVICE NUMBER \_\_\_\_\_ 2nd DEVICE NUMBER (if applicable) \_\_\_\_\_

TEST ADDRESS ZIP CODE \_\_\_\_\_

3. **Avoid exposing samples to extreme temperatures.** Excessive heat may cause air bubbles to appear in the vial, possibly resulting in invalid results. Additionally, water samples can freeze in transit during the winter months. If freezing conditions are expected, activate and place a small hand warmer packet next to the sample before returning the kit to the lab. **AccuStar Labs is not responsible for invalid results or for a free replacement kit if we receive a sample that has frozen during transit to the lab.**
4. **To ensure the most accurate results,** send your test kit and completed datasheet to AccuStar Labs immediately using a delivery service that will ensure arrival within 4 days. (Overnight or 2-day shipping are recommended.) If 7 days elapse between sample collection and receipt at the lab, the results will be invalid (4 days between collection and receipt if in Connecticut or New York). Your sample will be processed the day of arrival and the report will be issued the next business day.

### **1st Class Mail Delivery is Not Guaranteed**

Most test kits sent to us via 1st Class Mail arrive at the lab within 3 to 5 days. However, if you need guaranteed delivery, AccuStar recommends that you send your kit via FedEx, UPS, or Express Mail. You may purchase return shipping labels at discounted rates from AccuStar.

If delivery of your kit is delayed more than 7 days (after 4 days if testing in Connecticut or New York), AccuStar Labs is not responsible for invalid results or for a free replacement test kit.

Feel free to call us with any questions you may have at 888-480-8812. Our business hours are 8:30am to 5:00pm Eastern Time, Monday-Friday.

Thank you for choosing AccuStar Labs.
